

## Instructions for Completing a DTVPal DVR Software Update via the Internet

1. Connect the DTVPal DVR to your modem using a network cable.
2. Go to the Broadband menu (**Main Menu - Setup - Broadband**) and select option 1, **Network Setup**.

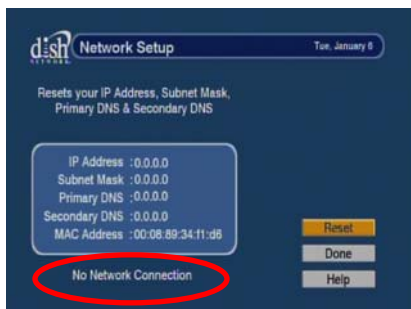

3. If a Network Connection is detected (see screen shot below), select **Done** to return to the Broadband menu.

*The information in this document may change without notice.*

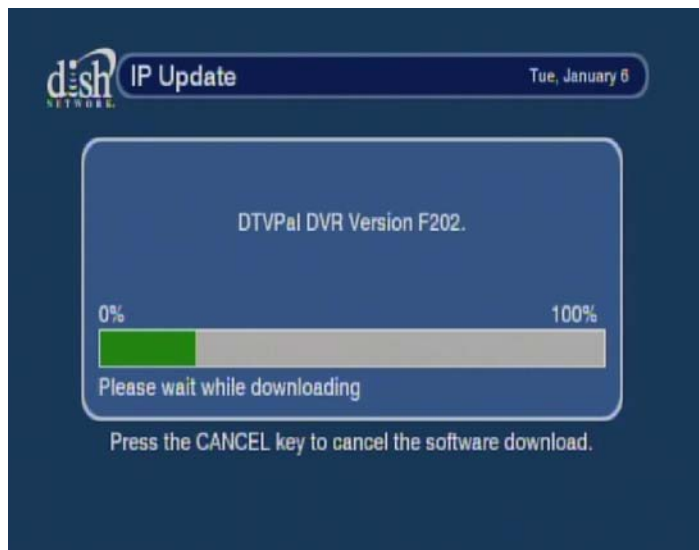

**If values are zero, check that your broadband modem is connected and powered up. Then press “Reset Connection”.**

4. Select option 2, **Software Update**, from the Broadband menu. A pop-up will appear saying “Checking for IP update.”

5. “IP Download Available” should appear with the “Download” option highlighted. The current software version and the new software version will be displayed. Press **SELECT** to start the software update. Progress will be displayed on the “IP Update” menu.
